Zone-Free

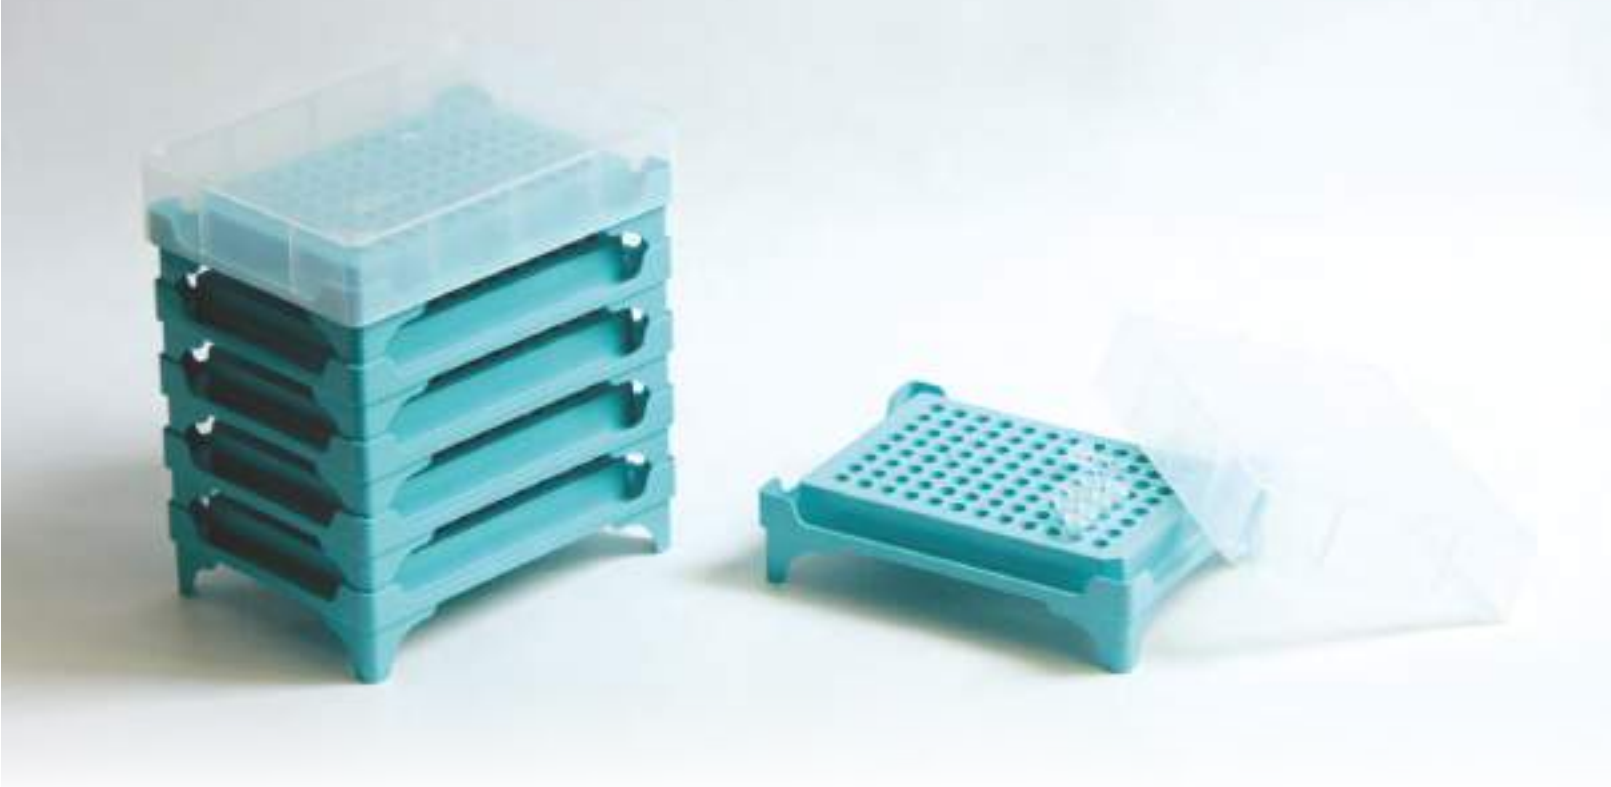

Pierceable Sealing Films (For General Applications)

Zone-Free™ films feature adhesive-free top layer with a inert white polypropylene/adhesive sublayer. The easy-piercing top layer allows direct sample recovery with pipette tips without adhesive fouling and minimizes adhesive contact with samples.

X-Pierce™ films are designed for temporary protection of samples in multiwell plates. Precut "X" over each well creates four flaps that easily bend downward when pushed by pipette tip allowing sample access without adhesive fouling. The flaps return to their original position after sampling for continued protection.

Blue Light Transilluminator

Moxcare MCBLT01 is a high-intensity LED light transilluminator, which allows scientists safe viewing of a wide range of fluorescent stained DNA/RNA gels. It produce an Epi-blue light with a narrow emission peak centered at 470 nm. This is not only safer but is comparable to UV for the excitation of most fluorescent dyes, including Ethidium bromide, GelRed, GelGreen, SYBR Gold, SYBR Green, SYBR Safe, and Syngene's new UltraPower DNA safe dye.
